GREEN SERIES 

LOGO tape GREEN SERIES

As a specialist in self-adhesive tapes, and in order to improve the protection of our environment, we are responsible for making a positive contribution through sustainable products and to give our environment back a green footprint.

The LOGO tape GREEN SERIES is a sustainable product line from our product portfolio and consists of:

-  Self-adhesive tape
-  Handles (Handylift)
-  Packaging materials
-  Barrier films

Water activated tape (WAT), the environmentally friendly sealing

Application

Production

E-commerce

Transport

The water activated tape (WAT) is a sustainable adhesive tape solution for a strong and permanent bond. Its sealing properties make it ideal for closing cardboard packaging and offers a superior tamper evident seal.

Our water activated tapes consist of a kraft paper backing and a starch-based adhesive. Moistened with water this tape offers a permanent organic connection with the box - tampering with the closure of the goods is immediately visible. The environmentally friendly water activated tapes are 100% biodegradable and recyclable. They are mainly made from renewable raw materials and are also ideal for closing light to medium-weight cardboard packaging. Water activated tape is printed with water colours. These can be printed and assembled according to your individual specifications.

Why WAT? With our water activated tape, the cardboard box can be disposed of together with the adhesive tape. Water activated tape enables the detection of possible thefts.

Easy Application
automatic or manual

Environmentally friendly

Insensitive to
light, temperature fluctuations
and aging

Faster application than
conventional adhesive tapes

Guarantees an
anti-theft lock

Sticks to very box

Water activated tape

r-PET self-adhesive tape made of PET with a PCR component

Carrier material contains
70% PCR-Material

High initial adhesion

Solvent free

rPET requires less
production resources in comparison
to conventional polyester

Universal packaging tape

LT r-PET is an adhesive packaging tape based on an r-PET carrier with a hotmelt adhesive.

LT r-PET is an environmentally friendly printable packaging tape.

LT r-PET is universally suitable for the closure of light to medium-weight cartons.

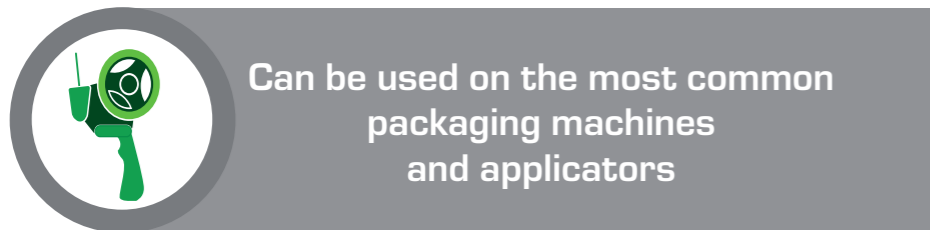

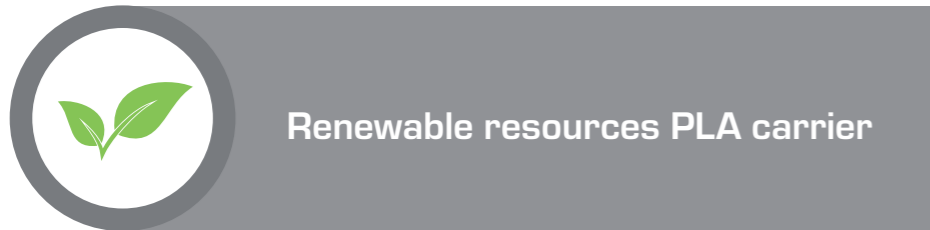

Its carrier material contains 70% post-consumer recycling and can be printed and packaged according to your individual specifications.

Why rPET? It is as good as conventional polyester, but it requires fewer production resources and gives the material a second life.

BIO tape

environmentally friendly packaging tape

BIO tape is a universally applicable self-adhesive tape for the closing of shipping cartons. It is produced from environmentally friendly materials. BT1350 does not contain any solvents; the innovative PLA (Polylactid-acid) carrier is made of renewable resources.

BT1350 can be printed to your specific requirements in a sandwich print to a maximum of 6 colours. The printing is located between the film carrier of the tape and the adhesive making it rub-resistant and at the same time offering an exceptionally bright coloured finish.

Our packaging tapes can be used on the most common packaging machines and applicators. Thermal waste processing is possible without any issues. In the paper- and carton regeneration process BT1350 can be separated very easily.

Why BIO tape? BIO tape is the environmentally friendly tape, made with a renewable resources PLA carrier.

Paper tape recyclable packaging tape

LT 266 is an adhesive packaging tape with a silicone-free paper backing from sustainable forestry and coated with natural rubber.

LT 266 is a recyclable packaging tape that is printed with water colours. The material can be used universally for the closure and individual labelling of light to medium-weight shipping boxes.

LT 266 can be unrolled easily and quietly. It is also a single variety alternative to plastic-based adhesive tapes.

Why paper tape? With our paper tape, the cardboard box can be recycled together with the tape.

Recyclable

Silicon free,
free of synthetic plastics

Good moisture
and weather resistance

Can be unrolled easily
and quietly

Universal packaging tape
