

# STEADFAST TAPES

Manufacturers of Custom Self-Adhesive Tapes

Part of the **LOGO** tape group

# HOW TO ORDER

# HOW TO ORDER

## ARTWORK

Our graphics team can create artwork based on your specific instructions or using artwork you provide. We accept artwork in the following file types: Illustrator(.ai), Vector(.eps), Outline PDF(.pdf). Please ensure fonts are outlined or supplied. Artwork for approval will be received within 24 hours.

## UNWIND DIRECTION

Please choose one of the below unwind directions:

## MATERIAL & ADHESION

Select the best product to suit your needs:  
**Polypropylene** with a Hotmelt - Low Noise acrylic - Solvent adhesive  
**Vinyl, RPET, Kraft Paper, Reinforced Paper, Water Activated.**

## COLOURS

Base tape colours are available in white, buff and clear. For print choose between our 26 standard colours or from the pantone range.

## DIMENSIONS

Standard widths from 9mm to 150mm  
Standard lengths from 33m to 1056m  
Cores: (internal dia) 76mm, 50mm  
Please contact the sales team if you require bespoke sizes.

## QUANTITIES

Knowing the annual quantity and the preferred order quantity ensures that we offer the best pricing; as the size of a production run has a bearing on the price of an individual reel.

We have the ability to deliver direct to our customers or white label to another required address.

# MATERIALS & ADHESIVES

## **PP / POLYPROPYLENE**

A great all rounder for all sealing needs, suitable for securing cartons before shipping or storing. A strong tear resistant tape for use with a dispenser, as it cannot be hand torn. Available with Acrylic, Hot-Melt, Low-Noise or Solvent adhesive dependant on the application.

## **PVC / VINYL**

A strong tape with high resistance to extreme temperatures and moisture. Excellent for securing heavier boxes. A high-tack, low-noise release tape allowing it to be hand torn or used with a dispenser.

## **KRAFT PAPER**

An environmentally friendly choice. Made from paper with a strong adhesive. Kraft paper tape creates a bond with cardboard allowing them to be recycled together.

## **GUMMED PAPER**

The natural adhesive on the tape is activated with water; creating a strong bond with cardboard as the adhesive soaks into the board. It is recyclable with the box, biodegrades and is tamper evident. A specialist tape dispenser is required for this tape (which we can provide).

## **REINFORCED PAPER**

The Paper comprises cross weave glass fibre filaments for extra security and strength. Available in both Gummed and adhesive.

## **RPET**

A PET tape that offers 70% or 85% recycled content. High tack performance on cartons. Exempt for plastic packaging tax.

## **BIOTAPE**

An environmental friendly material, containing no solvents; the innovative PLA (Polylactidacid) carrier is biologically degradable and completely compostable as defined in DIN EN 13432:2000-12. A strong all rounder.

# MATERIALS & ADHESIVES

## SOLVENT

This aggressive adhesive instantly bonds and sticks to all surfaces. Suitable for almost all situations, especially where others may fail (like freezers).. Once applied this adhesive will stick permanently.

## ACRYLIC / LOW NOISE

This adhesive is produced using water-based (solvent-free) adhesive acrylic. Resistant to ultraviolet rays and high temperatures.  
Low / Noise - cohesive.  
Standard Acrylic - more adhesive of the two.

## HOT MELT

Hot melt adhesive liquefies when heated and is applied using a hand held or manual applicator. The adhesive is pressure sensitive. It creates a long term bond which is great for heavier cartons and colder conditions.

## GUMMED

The natural adhesive on the tape is activated with water; creating a strong bond with cardboard as the adhesive soaks into the board. It is recyclable with the box, biodegrades and is tamper evident. A specialist tape dispenser is required for this tape (which we can provide).
